

Data Flow Diagram

Date	01 October 2026
Team ID	SWTID-2026-1564
Project Name	Courier Management System
Maximum Marks	2 Marks

Shows how data moves between external entities (ellipses), numbered processes (rectangles with a header) and data stores (green rectangles) in the Courier Management System. Data stores correspond to the custom Salesforce objects.

Process	Description
1.0 Register Customer	Customer details are validated (email, 10-digit phone, 6-digit pincode) and saved to Customer__c.
2.0 Create & Validate Shipment	Shipment is created with source, destination, weight, price, status and expected date; validation rules reject invalid values.
3.0 Assign Delivery Agent	Branch Manager links the shipment to a Delivery Agent, who belongs to a Branch.
4.0 Record Delivery Update	A Delivery Update creates a record; the record-triggered Flow copies its status to the related Shipment.
5.0 Generate Invoice	Invoice with amount, date and payment status is linked to the shipment.
6.0 Build Reports & Dashboard	Reports (shipment status, agent performance, revenue by branch, customer summary) feed the Courier Management Dashboard.
