

Solution Requirements

Date	01 October 2026
Team ID	SWTID-2026-1564
Project Name	Courier Management System
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Functional requirements describe what the system should do; non-functional requirements describe how well it should perform.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users log in to the Salesforce Lightning org with a unique username and password. Each user is created with a valid email, role and profile (FR-01 to FR-07 depend on authenticated access).	High
2	Authorization levels	Four profiles control access: Courier Admin (full configuration and administrative control), Branch Manager (branch-level shipment and agent operations), Delivery Agent (update assigned shipment delivery information) and Customer Support (customer and tracking enquiries). A role hierarchy controls data visibility.	High
3	External interfaces	No external API is implemented in this version. SMS, email notifications, GPS and mobile features are proposed future extensions.	Low
4	Transactions processing	Create and maintain customer records (FR-01); create shipments with source, destination, weight, price and status (FR-02); associate a shipment with a delivery agent (FR-03); record delivery updates (FR-04); maintain branch and invoice information (FR-05).	High
5	Reporting	Reports: Shipment Status Summary, Agent Performance, Revenue by Branch and Customer Summary. Courier Management Dashboard with Donut, Bar and Column charts (FR-06).	High
6	Business rules, etc.	Validation rules: email required, 10-digit phone, 6-digit pincode, positive weight and price, expected date not in the past, valid agent email, branch code mandatory, remarks required when status is Delayed (FR-07). A record-triggered Flow copies Delivery Update status to the Shipment.	High
7	Compliance to laws or regulations	No specific legal certification is claimed. Salesforce platform security is used; access is restricted by profiles and roles.	Medium

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
8	Other	Lightning App named <i>Courier Management System</i> with tabs for Customers, Shipments, Delivery Agents, Branches, Delivery Updates, Invoices, Reports and Dashboards.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Common records and tracking information should load efficiently; Flow should run without errors.	Records open correctly and Flow completes without errors in testing
2	Scalability	The design should allow additional branches and records.	New Branch, Agent and Shipment records can be added without redesign
3	Security & Data Privacy	Access is separated according to user responsibilities using profiles, roles and permissions.	Restricted user sees only permitted objects/actions (Test T09)
4	Reliability & Availability	Automation should execute consistently for valid records; the cloud platform should be available when required.	Flow updates shipment status for every valid Delivery Update (Test T06)
5	Usability & Accessibility	A clear Salesforce Lightning interface with logically grouped page-layout sections.	Staff can reach every CMS module from the app navigation
6	Other	Maintainability: configuration-based (no custom code); data consistency through validation rules.	Invalid entries are blocked with clear error messages
