

Technology Stack

Date	01 October 2026
Team ID	SWTID-2026-1564
Project Name	Courier Management System
Maximum Marks	2 Marks

Define Your Technology Stack:

The Courier Management System is a configuration-based Salesforce application. The table below lists the technology chosen for each architecture component and the justification.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	Salesforce Lightning Experience (Lightning App, tabs, page layouts)	Clear, ready-made user interface; staff can move between customers, shipments, agents, branches, updates, invoices, reports and dashboards.
2	Backend / Server-Side (Business Logic)	Salesforce Flow (record-triggered) and Validation Rules	Automates shipment status updates and blocks incorrect data without writing custom code.
3	Database / Data Storage	Custom Salesforce objects: Customer__c, Shipment__c, Delivery_Agent__c, Branch__c, Delivery_Update__c, Invoice__c	Strong relational mapping through Lookup and Master-Detail relationships.
4	Cloud / Hosting / Deployment	Salesforce Developer Org (cloud platform)	Free cloud environment for learning and project development; supports access when required.
5	Security & Access Control	Profiles, Roles and Permissions	Separates access for Courier Admin, Branch Manager, Delivery Agent and Customer Support.
6	Analytics	Salesforce Reports and Dashboards	Gives operational visibility: shipment status, agent performance and revenue by branch.
7	Version Control & CI/CD	Not used (org-based configuration)	Project is configured directly in the Salesforce org; a GitHub link can be added in the Project Executable Files section if the team uses one.
8	Third-Party APIs / Other Tools	None in this version	SMS/email notification and GPS integrations are listed as future scope.
