

Problem-Solution Fit Canvas

Date	01 October 2026
Team ID	SWTID-2026-1564
Project Name	Courier Management System
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

The canvas below checks that the proposed Salesforce-based solution addresses the root causes, behaviors and limitations of the target users.

1. CUSTOMER SEGMENT(S) [CS] - Branch Managers - Customers sending parcels - Delivery Agents - Customer Support Staff	6. CUSTOMER LIMITATIONS [CL] - Records kept in separate registers or spreadsheets - Needs platform knowledge and time for initial setup - Users need correct licenses and permissions	5. AVAILABLE SOLUTIONS [AS] - Manual register - easy to start, hard to search/update - Spreadsheet - simple storage, limited automation - Separate web portal - customizable, needs extra infrastructure
2. PROBLEMS / PAINS + FREQUENCY [PR] - Tracking is spread across records (daily) - Status updates not centralized - Manual sharing of assignments - Support checks multiple records for each query	9. PROBLEM ROOT / CAUSE [RC] - No single system connecting customers, shipments, agents and updates - Dependence on manual records	7. BEHAVIOR + ITS INTENSITY [BE] - Managers check status and follow up repeatedly - Support staff look up several records to answer one query
3. TRIGGERS TO ACT [TR] - Customer complaints about delays - Delayed or missed updates - Growing number of shipments and branches	10. YOUR SOLUTION [SL] - Salesforce Lightning app that centralizes Customer, Shipment, Agent, Branch, Delivery Update and Invoice records - Validation rules + record-triggered Flow - Profiles, roles, reports and dashboard	8. CHANNELS OF BEHAVIOR [CH] ONLINE: Salesforce Lightning app, reports and dashboards OFFLINE: Manual registers and phone follow-ups (to be replaced)
4. EMOTIONS BEFORE / AFTER [EM] Before: Uncertain, burdened by follow-ups After: In control, confident, informed		

Problem-Solution summary:

Business Issue	CMS Response
Scattered shipment information	Centralized Shipment records
Incorrect data entries	Validation rules
Manual status propagation	Record-triggered Flow
Unclear user permissions	Profiles and roles
Difficult performance review	Reports and dashboards
