Project Proposal (Proposed Solution) report

The proposal aims to bring courier operations such as customer registration, parcel booking, branch coordination, delivery assignment, status updates and billing into one Salesforce environment, reducing manual work and improving shipment visibility.

Project Overview

Objective	Provide a centralized platform for recording and monitoring courier operations: maintain customer and shipment data, connect shipments with agents and branches, automate selected status updates, provide role-based access and create reports and dashboards.
Scope	Salesforce Lightning application with six custom objects (Customer, Shipment, Delivery Agent, Branch, Delivery Update, Invoice), validation rules, page layouts, a record-triggered Flow, profiles, roles, users, reports and a dashboard.

Problem Statement

Description	When courier tasks are maintained through separate registers or spreadsheets, information is difficult to locate and updates may be delayed, affecting branch managers, customers, delivery agents and support staff.
Impact	Solving this will give fewer follow-ups, quicker responses to tracking queries, fewer missed updates and clearer control over branch operations.

Proposed Solution

Approach	Configure a cloud-based Salesforce CRM application using objects, relationships, validation rules, page layouts, Flow, profiles, roles and reporting features. Customers link to shipments; shipments reference delivery agents; agents belong to branches; delivery updates belong to shipments; invoices reference shipments.
Key Features	- Centralized customer and shipment records - Validation rules to reduce incorrect or incomplete entries - Record-triggered Flow that copies Delivery Update status to the Shipment - Role-based access (Courier Admin, Branch Manager, Delivery Agent, Customer Support) - Reports and Courier Management Dashboard

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications	Standard laptop/desktop with a web browser (platform runs in the Salesforce cloud)
Memory	RAM specifications	Standard device memory (no special requirement)
Storage	Disk space for data, models and logs	Data stored in the Salesforce Developer Org
Software		
Platform	Cloud CRM	Salesforce Lightning Experience (Developer Org)
Features	Configuration tools	Objects, Fields, Validation Rules, Page Layouts, Flow Builder, Profiles, Roles, Reports, Dashboards
Development Environment	Setup	Salesforce Setup and Object Manager
Data		
Data	Source, size, format	Sample records entered manually into the org: customers, shipments, agents, branches, delivery updates and invoices
