

Solution Architecture

Date	01 October 2026
Team ID	SWTID-2026-1564
Project Name	Courier Management System
Maximum Marks	5 Marks

Solution Architecture Diagram:

High-level view of the CMS: users work in the Lightning app; security settings control access; validation rules, Flow and reports act on data held in custom Salesforce objects.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Lightning App where customers' records, shipments, agents, branches, updates, invoices, reports and dashboards are accessed by staff.	Salesforce Lightning Experience, Tabs, Page Layouts

Component Name	Description / Role in Architecture	Technologies Used
Security Layer	Controls which objects and actions each user type can use and how data is shared up the hierarchy.	Profiles, Roles, Permissions
Automation / Logic	Validation rules block incorrect entries; the record-triggered Flow copies delivery-update status to the shipment.	Validation Rules, Salesforce Flow
Analytics	Turns stored records into summaries: Shipment Status Summary, Agent Performance, Revenue by Branch, Customer Summary.	Salesforce Reports and Dashboards
Database	Stores all courier data with relationships: Customer to Shipment, Shipment to Agent, Agent to Branch, Update and Invoice to Shipment.	Custom Objects (Lookup and Master-Detail)
