Project Name	Courier Management System
Maximum Marks	5 Marks

Coding & Solution

The Courier Management System is implemented through Salesforce declarative configuration (objects, fields, validation rule formulas, Flow, page layouts, profiles, roles, reports and dashboards). The table summarizes the solution.

Solution Summary

Field	Details
Repository Link / URL	[Paste your GitHub / GitLab link here - optional, since the solution is configured in a Salesforce org]
Programming Language(s)	Declarative (no-code) Salesforce configuration; Salesforce formula language for validation rules
Framework(s) Used	Salesforce Lightning Experience, Salesforce Flow
Key Features Implemented	6 custom objects with relationships; 9 validation rules + delayed-remark rule; record-triggered Flow for shipment status; Lightning App; 4 profiles, role hierarchy and users; 4 reports; Courier Management Dashboard
Pending / Incomplete Features	SMS / email notifications, GPS delivery location, mobile tracking app and customer self-service portal (proposed future scope, not part of this version)
Setup / Run Instructions	1. Sign up for a Salesforce Developer Org and activate it. 2. Open Setup, create the six custom objects, tabs and fields. 3. Add validation rules and page layouts. 4. Create and activate the record-triggered Flow on Delivery_Update__c. 5. Create the Lightning App, profiles, roles and users. 6. Build the reports and the Courier Management Dashboard. 7. Log in and run test cases T01-T09.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes (configuration is organized per object, rule and flow)	Yes

S.No	Criteria	Status (Yes / No)
2	Meaningful variable and function names are used (API names such as Shipment__c, Assigned_Agent__c)	Yes
3	Code includes comments / documentation where necessary (rule error messages and field descriptions)	Yes
4	Error handling is implemented for critical operations (validation messages, Flow debug)	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	No (org-based configuration)

Additional Notes / Comments:

The solution is configuration-based, so there is no application source code. Everything described here exists as metadata in the Salesforce org; add a repository link above only if the team exports the metadata to Git.
